#### HOW TO TAKE THE MEASURES:

1. With a pencil draw the foot profile on a paper sheet trying to stand right up and still and paying attention to the position of the pencil that must be kept in perpendicular to the sheet.
2. Draw a line from the tip of the toe to the heel by dividing the drawing into two halves. In this way you will have the measure of the foot length.
3. Using a ruler take the measures of the line drawn. For ex., if the length is 25.6 cm, i.e. 256 mm, the correct size will be 39. One size more must be always considered in comparison to the measure taken.
4. Always check the size charts of Women and Men's shoes to identify the suitable size.
